Response by:

Dr. Tim Evans, Director of Health, Nutrition, and Population,
The World Bank

Discussion:

Panels of global health policy and academic experts

Moderated by:

Dr. Richard E. Besser, Chief Health and Medical Editor, ABC News

As the world approaches the 2015 deadline for achieving the Millennium Development Goals, we are at a remarkable inflection point in history.

A new report published in The Lancet, shows that if we make the right investments in health today, we could achieve universally low rates of infectious, maternal and child deaths by 2035. Pro-poor universal health coverage will be essential to achieving this convergence while protecting families from medical impoverishment.

Written by a group of 25 renowned economists and global health experts, including the Mailman School of Public Health's Dr. Margaret Kruk, Global Health 2035 is an ambitious investment framework that provides a roadmap to achieving global health equality within a generation.
